My Library Management System

A demonstration of the core working features.

Key System Features

Secure Access

Dedicated librarian login ensures only authorized staff can manage data.

Book Management

Comprehensive features to Add, View, Edit, and Delete book records.

Real-Time Tracking

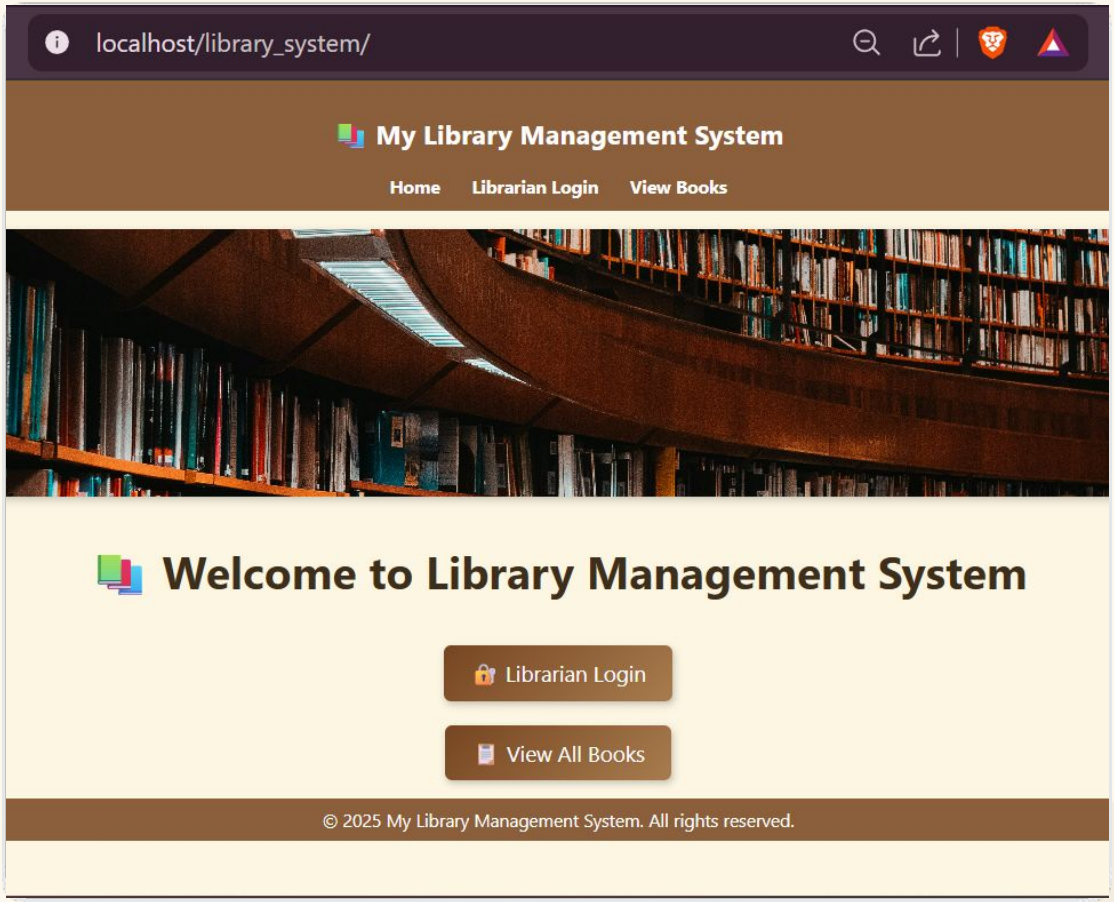
Book copies are automatically updated during borrow and return actions.

The Public Homepage

Welcome to the System

This is the main entry point for all users, featuring a clean and responsive design.

- It provides a clear welcome message and an appealing library image.
- Gives two main navigation paths: **Librarian Login** and **View All Books**.

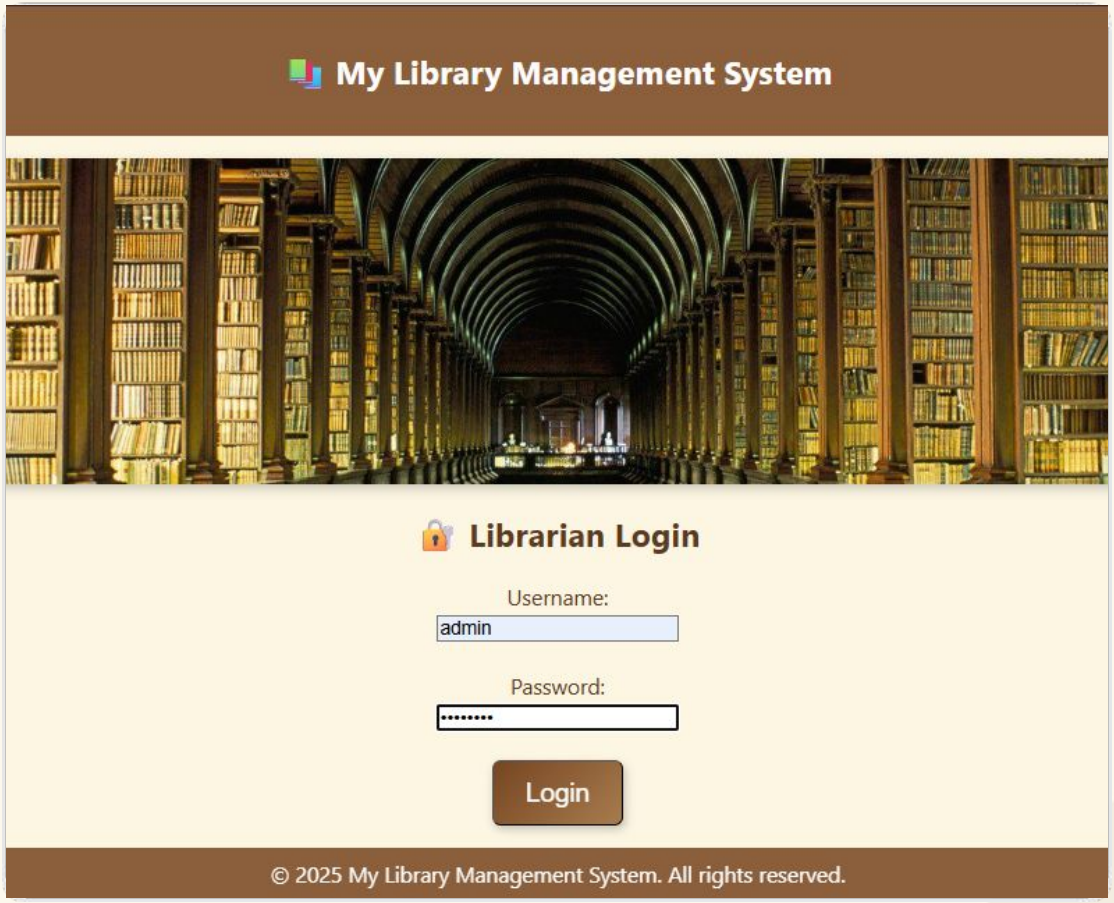


Secure Librarian Login

Authorized Access Only

Access to the management dashboard is restricted to protect the library's data.

- Only authorized librarians with valid credentials can log in.
- The system is designed to show error messages for incorrect login attempts.
- This ensures that student or public users cannot change data.



The Librarian Dashboard

The Control Center

After a successful login, the librarian is directed to the main dashboard.

- This is the central hub for all management tasks.
- From here, the librarian has clear options to:
  - **Add Book**
  - **View / Manage Books**
  - **Logout**

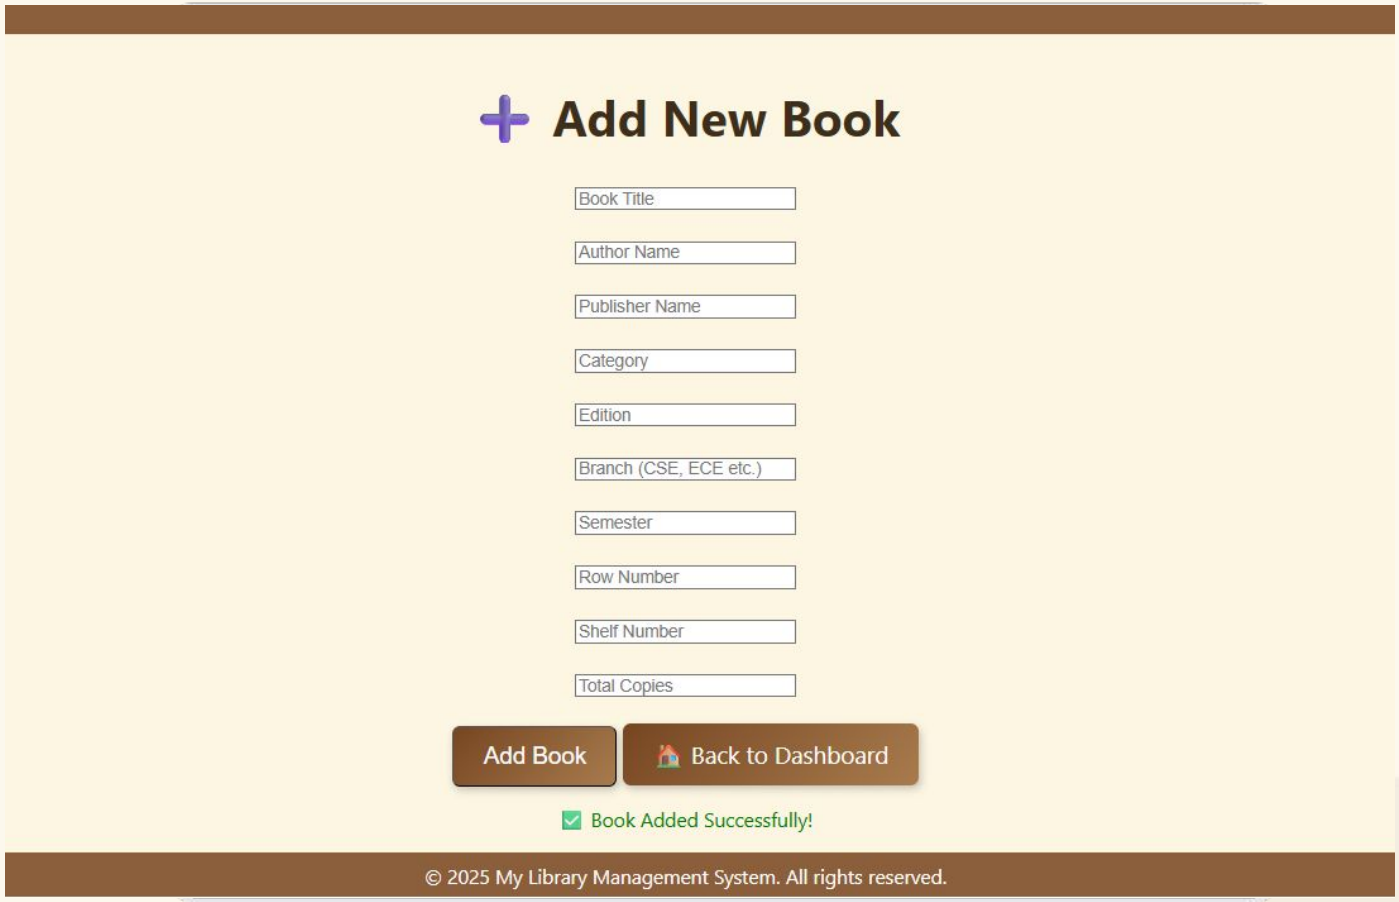
Book Management: Add New Book

Adding to the Catalog

Librarians can easily add new books to the system using this comprehensive form.

- It captures all required details, including:
- Title, Author, and Category
- Edition, Branch, and Shelf Number
- Semester and Total Copies

The system confirms successful addition: "Book Added Successfully!"



Book Management: View & Manage

Search by Title, Author, Edit | Search

Title	Author	Category	Edition	Branch	Row	Shelf	Available Copies	Status	Actions
Data Structures	Mark Allen Weiss	Textbook	3rd	CS	1	1	6	Available	Edit Delete
Digital Logic	Morris Mano	Textbook	5th	CS	1	2	5	Available	Edit Delete
Computer Networks	Andrew S. Tanenbaum	Textbook	5th	CS	2	1	4	Available	Edit Delete
Database Systems	Ramez Elmasri	Textbook	7th	CS	2	2	4	Available	Edit Delete
Operating Systems	Abraham Silberschatz	Textbook	10th	CS	3	1	4	Available	Edit Delete

The 'View Books' page displays all books in a clear table format, with search capabilities.

- **Actions:** Only the librarian has permission to **Edit** and **Delete** records.
- **Status:** Shows the current stock status and available copies.

Book Management: Search Functionality

Quickly Find Books

The system allows for efficient searching of books by various criteria.

- Users can search by Title, Author, or Edition.
- The search results dynamically update to show relevant entries.
- This makes it easy to locate specific books for management or borrowing.

Title	Author	Category	Edition	Branch	Row	Shelf	Available Copies	Status
dsa	Mark Allen Weiss	Textbook	5th	cse	5	3	25	Available

Core Logic: Borrow & Return System

When a book is BORROWED:

- The 'Available Copies' count decreases by one.
- If 'Available Copies' reaches **0**, the 'Status' automatically changes to **"Unavailable"**.

When a book is RETURNED:

- The 'Available Copies' count increases by one.
- If the 'Status' was "Unavailable", it automatically changes back to **"Available"**.

Security & Session Management

- **Role-Based Access:** Only librarians (admin role) have permission to edit and delete records. Students or public users cannot change any data.
- **Secure Logout:** The librarian can safely log out, which immediately destroys the session.
- **Redirection:** After logging out, the user is automatically redirected back to the main login page, ensuring the admin area is no longer accessible.

Thank You
