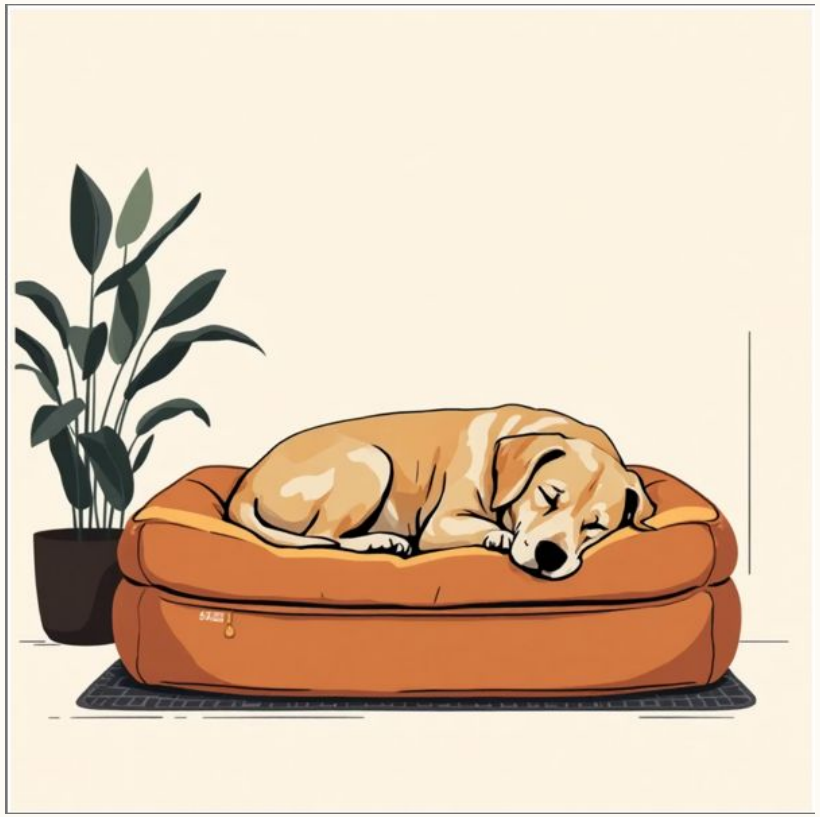
FurHelp

A Mini-Project Overview:

The Pet Consultant App



FurHelp

Project Overview

The Challenge

Pet health information is often scattered. Owners juggle multiple apps and paper records for appointments, medical history, and wellness advice, leading to confusion and inefficiency.

The Solution

FurHelp provides a single, unified web platform for all pet care needs. It centralizes pet health management, enhancing convenience for owners and workflow efficiency for doctors.

A Look at the Core Features

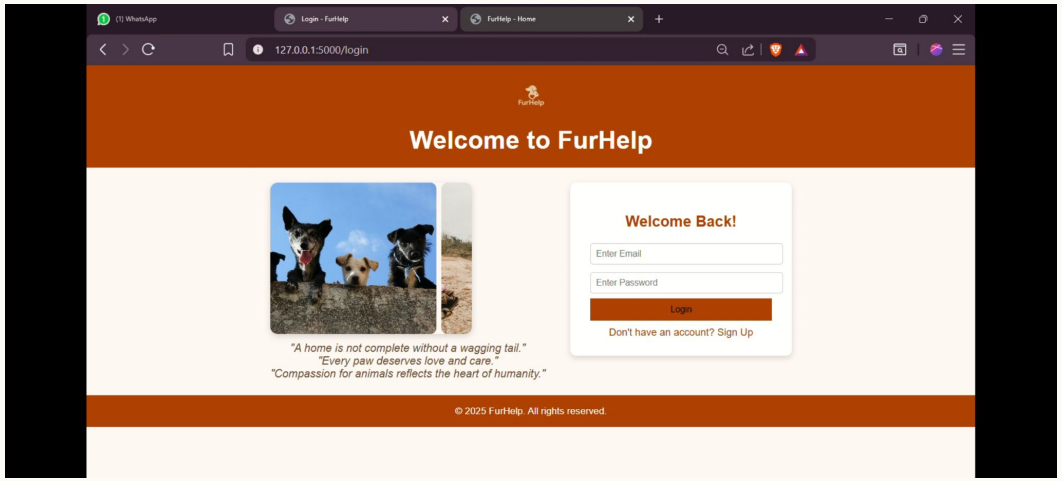
Showcasing the user and doctor experience

The User/Doctor login

The User & doctor Authentication

After user's or Doctor’s Signin they both are redirected to respective login pages.

only registered users are allowed.



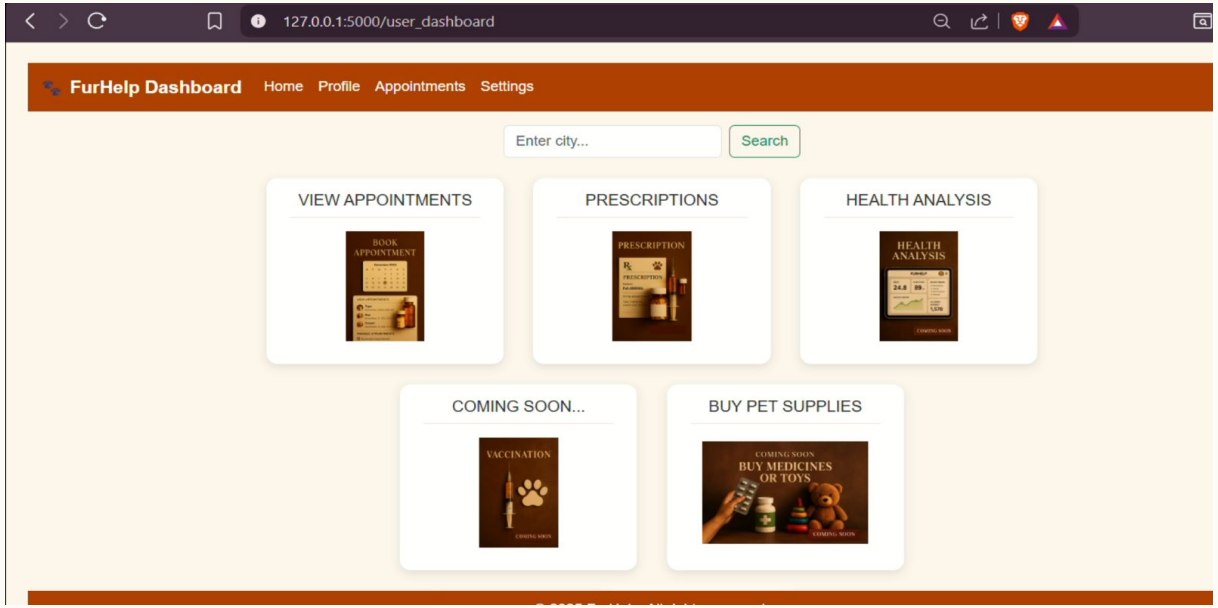
The User Dashboard

The User's Central Hub

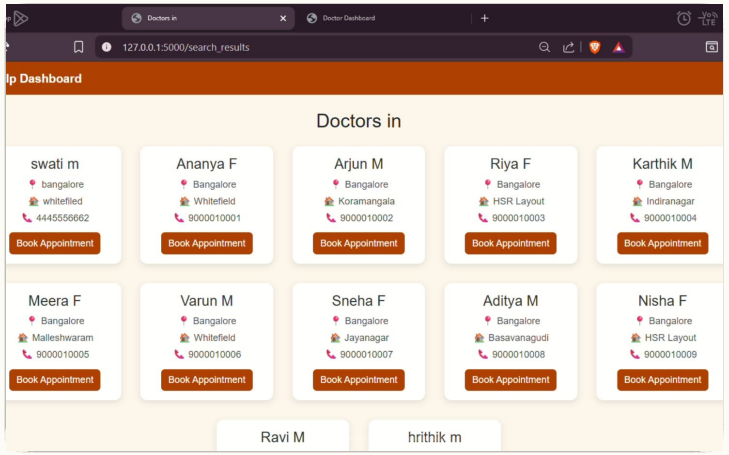
This is the user's home base after logging in. From here, they can navigate to all key areas of the application with a single click.

The clean, card-based layout allows for quick access to the most important functions:

- Viewing upcoming appointments
- Checking active prescriptions
- Analyzing their pet's health data

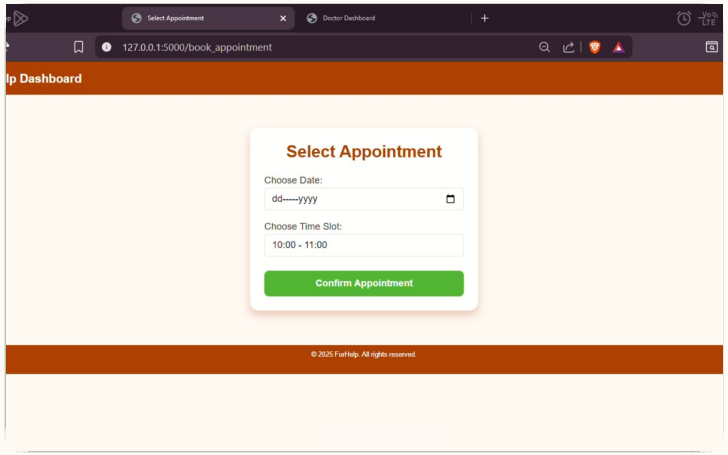


Core Loop: Seamless Appointment Booking



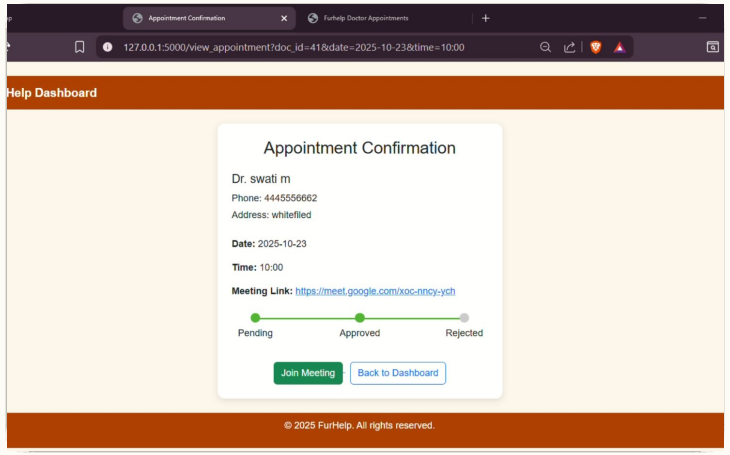
Step 1: Find a Doctor

Users can search for veterinarians by location and view a list of available doctors.



Step 2: Book a Slot

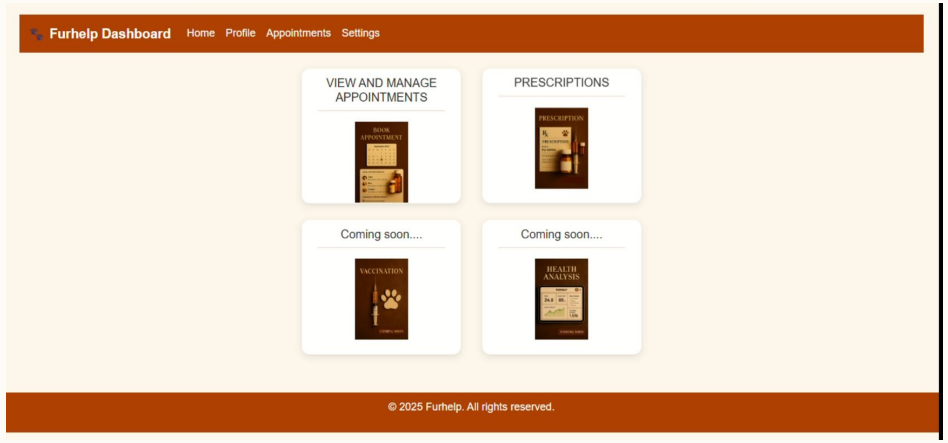
A simple form allows users to select an available date and time slot from the doctor's schedule.

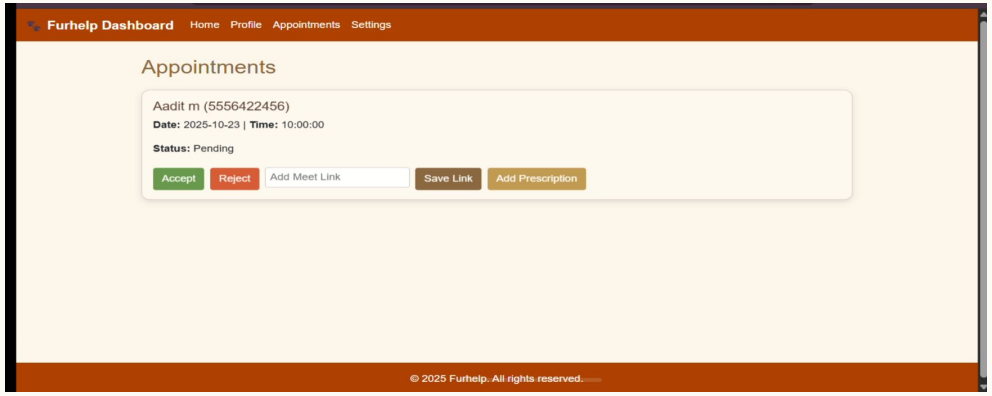


Step 3: Confirm Status

Users get a clear confirmation and can track the status of their appointment (Pending, Approved, etc.).

The Doctor's View: Managing Workflow



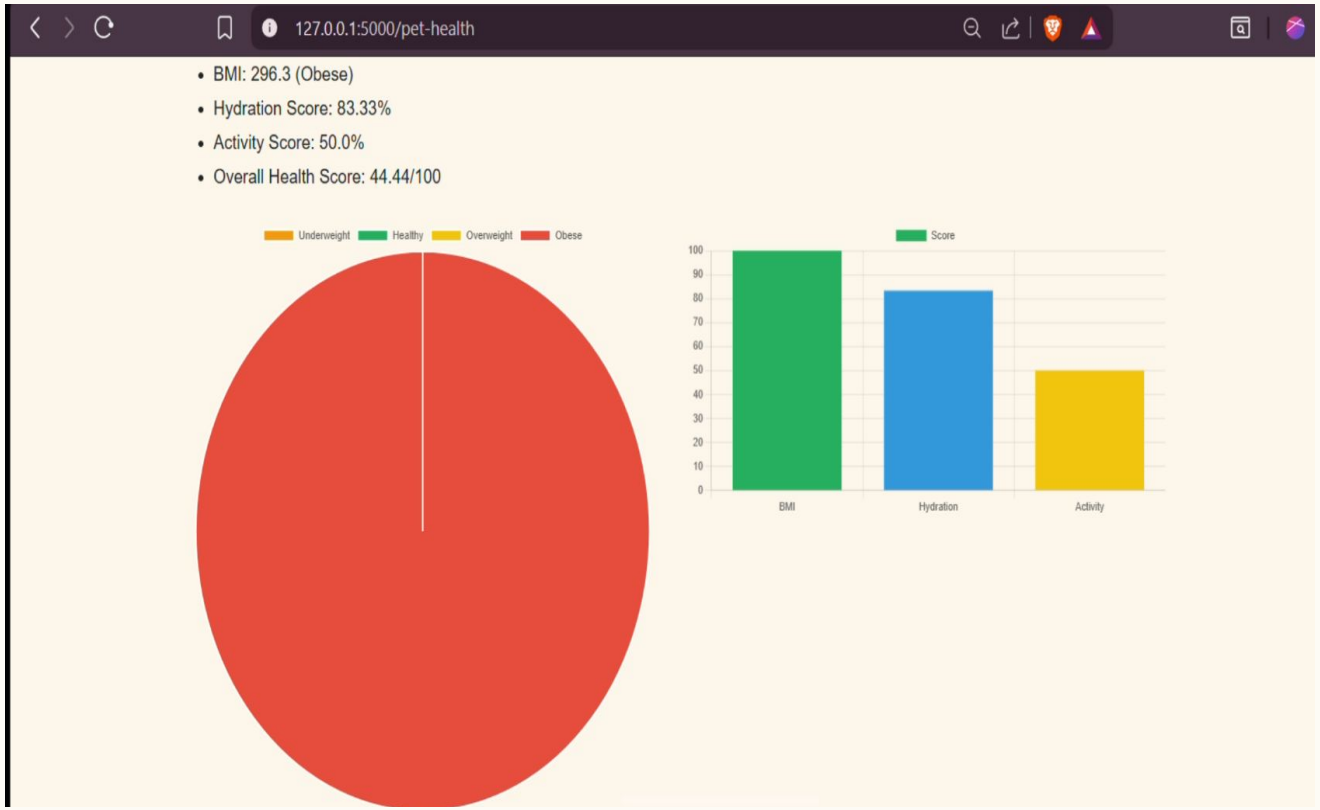


To create a complete ecosystem, doctors have their own dashboard to manage their workflow and patient interactions efficiently.

- **Manage Bookings:** Doctors can review incoming appointment requests and either Accept or Reject them with a single click.
- **Host Telehealth:** For virtual consultations, doctors can easily add a secure meeting link (e.g., Google Meet) to the appointment.
- **Issue Prescriptions:** Doctors can directly add a new prescription that is automatically linked to the patient and the specific appointment.

Feature Focus: Pet Health Analyzer

Going beyond simple bookings, FurHelp tracks key wellness metrics. The dashboard visualizes data for BMI, Hydration, and Activity, helping owners monitor their pet's health proactively.

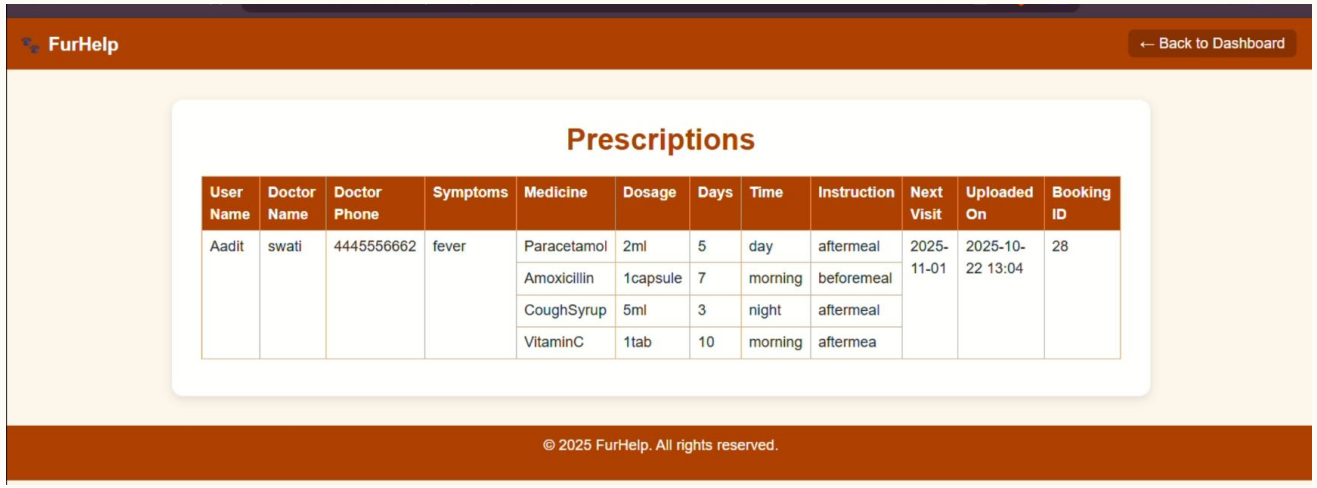


Feature Focus: Prescription Management

Clear & Structured Data

Both users and doctors can access a clear, itemized list of all prescriptions. This ensures transparency and accuracy for medical records.
When adding a prescription, doctors use a structured form to ensure all critical details are captured, including:

- Medicine Name
- Dosage (e.g., 2ml, 1 capsule)
- Duration (e.g., 5 days)
- Frequency & Instructions



User Name	Doctor Name	Doctor Phone	Symptoms	Medicine	Dosage	Days	Time	Instruction	Next Visit	Uploaded On	Booking ID
Aadit	swati	4445556662	fever	Paracetamol	2ml	5	day	aftermeal	2025-11-01	2025-10-22 13:04	28
				Amoxicillin	1capsule	7	morning	beforemeal			
				CoughSyrup	5ml	3	night	aftermeal			
				VitaminC	1tab	10	morning	aftermea			

Engagement & Awareness

Pet Health Awareness

FurHelp is more than just a utility; it's a resource. A pop-up provides timely information on common pet diseases and health concerns, helping owners stay informed.

Pet Blog

A dedicated blog section is planned to offer deeper insights, articles, and expert advice on all aspects of pet care, from nutrition to behavior.

My Development Process

Backend (My Focus)

we personally designed and coded the entire backend. This involved creating the database schemas, building the API routes, and implementing all the core business logic, such as the structured prescription system and the doctor's approval workflow.

Frontend

For the frontend, we focused on designing a clean and intuitive user interface. translated the backend functionalities into a responsive, user-friendly experience, ensuring seamless data flow and a cohesive visual identity across the entire application.

Future Development

Vaccination Tracking

Adding a complete module for tracking vaccination history and, most importantly, sending automated reminders to users when their pet is due for a shot.

Pet Supplies Store

Integrating an e-commerce section for pet food, medicine, and supplies, creating a one-stop shop for all pet needs and a monetization path.

Pet Blog CMS

Launching the full blog as a Content Management System (CMS) to provide a rich, ongoing resource of valuable articles and advice for pet owners.

Thank You
